Full Stack Developer III (Future AI Focus)

Full Stack Developer III with experience building, enhancing and modernizing full stack enterprise applications using Java/Spring Boot, micro-services, cloud platforms, and modern UI frameworks. Proven ability to develop migration processes, improve performance at scale, and deliver secure, high-impact solutions. Future focus is to leverage proven knowledge attained through Udacity AI Tech Practitioner training and through development of a full stack AI demo project.

TECHNICAL SKILLS

AI Development Training: Visual Studio Code (VS Code), Python, React, FastAPI, Ollama, LangChain, ChromeDB, PyPDF, GitHub Copilot (OpenAI), ChatGPT

Languages & Frameworks: Java (8–17), Spring Boot, Spring Cloud Config, Spring MVC, Spring Data JPA, JDBC, Hibernate, REST APIs, JMS, JSON, Node.js, NPM, React, Angular, Thymeleaf, HTML5, CSS3, JavaScript

Cloud & DevOps: GCP, Azure, Jenkins, GitHub, CI/CD pipelines, Spring Cloud

Microservices & Tools: Eureka, Zuul, Maven/Gradle, RESTful services, Eclipse IDE, Agile

Data & Messaging: Oracle, DataStax (DSE), EHCache, JMS

Monitoring & Performance: Dynatrace, Splunk, AppDynamics, Grafana, JMeter

Security: OKTA, SSL/TLS, encryption (KMS), secure API design

PROFESSIONAL EXPERIENCE

FedEx Services | *Full Stack Developer III* | *14+ years*

- Developed first set of scalable micro-services for Enterprise Document Management (EDM) by utilizing Eureka service registry, API gateway, and Zuul load-balancing to perform concurrent batch processing on multiple document repositories to apply retention policy date based on country location code retrieved from enterprise PLEFS service.

- Developed enhancements to Revenue Document Storage (RDS)
  - Decoupled web services and implemented direct connect queries that resulted in performance improvements in the portal.
  - Developed web service interface for FDS ingestion, retrieval and reporting of ED4 documents.
  - Technical lead for Agile team of developers to migrate documents from IBM to EDM resulting in $1M cost savings for FedEx.
  - Developed EDMJmsClient to integrate with EDM services and portal to interface with NDS/ENS email/fax.
  - Received formal Bravo Zulu Award for the RDS Phase IV project work.

- Developed Java to facilitate batch migration of hundreds of millions of documents from Documentum to Datastax including error retry capability.

- Developed Java batch web service to recover missing documents to Archive by recalculating retention date and calling EDM Core Web Service update to trigger doc event to update and store missing ePRS documents in DSE, GCP and Archive DB.

- Worked with the Datamark Mexico/India teams to improve performance of the EDM HTML5 Viewer by implementing client browser cache and header cache control (expires) solutions, versioning, and modifying configuration to remove thumbnail view. Received a formal Bravo Zulu Award for this work.

- Partnered with InfoSec to implement eKMS API for credit card indicated airway bills.

- Developed EDM Core Web Services SSL layer, and built and installed SSL certificates.

- Designed and implemented an interim solution needed for EISTC PCI compliance by channeling redacted airway bills to EISTC until the permanent encrypted storage solution could be in place. Utilized https to channel unreacted airway bills to RWC/EC. Received formal Bravo Zulu Award for my ability to deliver this interim solution quickly.

- As part of EDC migration, responsible for the migration and re-hosting of the legacy GSDR Quick Search Portal to EDM Shipment Portal, and provided support for the tens of thousands of users for IDM/IMAGE access, CSM and firewall. Users included GSPs, eOps, 1Source, EMEA/APAC, ETD, FTN, Express/Ground/Freight.

- Modernized Currency by converting SOAP web services/WebLogic to Spring Boot Gradle REST services with OKTA, and by implementing CICD automated pipelines to replace the manual processes. Received BZ from LSSI management for helping that team code OKTA.

- Developed Spring Boot Gradle Datastax POC project using embedded Cassandra with Spring Data repositories to test out the CDS to Datastax conversion and migration.

- Member of Production Support On-Call team to provide support to clients during CSR testing, to resolve incidents/defects and to attend bridge calls opened by the Command Center.

- Created GCP scripts to bulk export documents from GCP for the legal team to do audit research and reporting.

- Enhanced the EDM Web Services to enable SPECIAL_SERVICES documents ingestion/retrieval. This project has enabled a projected 7% revenue growth in FY25 and aims to achieve an $8M revenue target through enhanced customer reach supported by sales and marketing efforts.

- Used Microsoft/GitHub Copilot to accelerate development by generating code, explaining complex logic, helping with Java 17 upgrades, creating Jmeter scripts, and debugging and fixing errors.

Walt Disney World | *Technical Specialist* **|** *8 years*

- Developed Java-based enhancements to the J2EE-based Vignette Content Management and Delivery System to enable parks, resorts, products and services data to be managed through workflow and delivered through configured published channels to various targets within the Sales and Booking Composite Application Systems.

- Developed Java-based enhancements to the Recommender module to read scoring data generated by Revenue Management and store it to the scoring database that drives the strategic products and services offers presented for sale on the public internet and to the booking agents.

M2 Systems Corporation (Muscato Corporation) | *Sr Software Engineer* **|** *5 years*

- Developed and maintained software modules to interface with ENGIN, a multi-platform online transaction processing switch that provides an intelligent bridge between different systems, applications, and devices. Software development included healthcare message/batch file formatting and processing, network protocol support, requester/server communications, MQSeries interface, task scheduler, Oracle PL/SQL, web services, and debit card transaction processing.

- Biggest onsite development contracts included Blue Cross/Blue Shield and Sacred Heart Medical Center.

- During development, worked directly with CEO who knew the core product code intimately, and travelled with him and his team to customer sites on many occasions to provide support.

TriCom, Inc. (ISR Global Telecom) | *Embedded Systems Engineer* **|** *5 years*

- As part of a company of only 5 employees, developed embedded systems to convert TANDEM Clip line protocol tasks to the Sierra Wide Area Network (SWAN) concentrator.
- Worked closely with driver and pSoS real O/S developers.
- Traveled to Germany to deploy the application at Daimler Chrysler customer site and perform Acceptance Test.

Lockheed Martin Corporation (Martin Marietta) | *Systems Engineer* **|** *8 years*

- Co-Op Student Worker during college.
- Developed simulations to analyze navigation, tracking system performance, and fixed-point scaling algorithms for the Central Guidance & Control Group.
- Formally commended for developing a ground-based tracker simulation to evaluate hardware and software improvements to a FLIR/LTT controlled turret and to determine feasibility of tracking air targets. Included mountain terrain, 2-D target images, background edge gate and tracking window borders, and 2-color video within the tracking window.
- Utilized simulation block diagrams of missile subsystems including airframe and actuator dynamics, sensors and filters, and feedback control loops to digitize filters and differentials.
- Utilized statistical analysis tools to perform fly-out sensitivities, transfer alignment analysis, and filter sizing and tuning for various IMU candidates to determine navigation requirements.

CERTIFICATIONS & TRAINING

Udacity AI Tech Practitioner Training
Skills Assessment: Generative AI Fundamentals
Score: 234/300 (Accomplished AI Solutions Architect)

GitHub Copilot Training & AI Engineering Workshops
FedEx Webinar Series

Mobile Application Development Certification
University of California, Irvine

EDUCATION

BS Computer Science, Scientific Specialization, Cum Laude
Academic Scholarship, Time-Shortened Degree
University of Central Florida, Orlando, FL

Minor Business Administration
University of Central Florida, Orlando, FL
