Senior Full Stack AI Engineer

Senior Full Stack AI Engineer specializing in privacy-first, decoupled microservices architectures, distributed systems, and multi-framework AI ecosystems. Leverages a proven track record of delivering business-critical solutions across both agile startups and Fortune 100 leaders, including FedEx, Disney, and Lockheed Martin. Demonstrated success architecting production-grade, local AI platforms that completely eliminate cloud API overhead using open-source LLMs (Ollama/Llama 3). Highly skilled in designing asynchronous orchestration engines, stateful LangGraph workflows with human-in-the-loop validation, and deterministic Declarative UI engines driven by strict JSON schema contracts and asynchronous token streaming to eliminate hallucinations and minimize user-perceived latency. Deep technical expertise in building robust Abstract Syntax Tree (AST) validation pipelines for secure, risk-free Text-to-SQL data synthesis.

TECHNICAL SKILLS

- **AI & Orchestration:** RAG, LangGraph, LangChain, Multi-Agent Workflows, Ollama, Langfuse, Prompt Engineering
- **Core Machine Learning:** PyTorch, TensorFlow, Scikit-learn, Pandas, Pydantic, Text-to-SQL Pipelines
- **Data Architecture:** Qdrant, Vector DBs, PostgreSQL, Cassandra (DSE), Oracle, SQL, CQL, JMS, Schema Validation
- **Backend Engineering:** Python, Java, FastAPI, Node.js, Spring Boot, Microservices, REST APIs
- **Frontend Systems:** React, Angular, JavaScript, Declarative UI Engines, JSON Schema, Tailwind CSS
- **Infrastructure & DevOps:** Docker, CI/CD, GitHub, Copilot, Claude, Cloud (GCP, Azure), SSL/TLS, KMS, Okta, Splunk, Dynatrace

AI ENGINEERING & ADVANCED SYSTEMS R&D

Independent AI Engineer | June 2026 – Present

Multi-Agent Research Approval Assistant

- Built with LangGraph for AI agents
- Features human-in-the-loop approvals
- Includes stateful, resumable workflows
- Uses Langfuse for observability natively
- **Minimized workflow errors: Lowered operational bottlenecks by 35%** using LangGraph-driven stateful workflows and Langfuse observability.

Enterprise Autonomous Analytics & Knowledge Engine

- Full-stack platform built on decoupled microservices
- Qdrant RAG pipeline & Text-to-SQL features via PostgreSQL
- Runs locally on open-source Llama 3 models
- Uses React and Node.js for deterministic UI layout rendering
- **Cut operational overhead: Reduced API costs to \$0 and guaranteed 100% data privacy** using local Llama 3

OmniMind: Multi-Framework AI Agent Ecosystem

- Unifies three distinct ML/AI paradigms
- Routes tasks via async orchestration engine
- Tabular analytics powered by Scikit-learn
- Vision inference with TensorFlow (MobileNetV2 workflow)
- Agent orchestration with LangChain + Ollama
- **Boosted processing efficiency: Improved multi-modal task routing speed by 50%** via an asynchronous multi-framework ML engine.

RAG Research Assistant

- Full-stack chatbot built using FastAPI
- Supports general chat & semantic search
- Vector retrieval & local LLM deployment
- Streams responses via Ollama & LangChain
- **Optimized document search: Reduced information retrieval time by 40%** through localized semantic search and vector retrieval.

PROFESSIONAL EXPERIENCE

FedEx Services | Orlando, FL | January 2012 - June 2026 (14+ years)

Full Stack Developer III | May 2018 – June 2026

Senior Software Engineer | January 2012 – May 2018

- **AI & Production Support:** Leveraged cutting-edge AI tools to accelerate development and problem resolution while serving on the Production Support On-Call team to manage triage, defect resolution, and CSR testing.
- **Frontend Data Visualization:** Created React and Node.js application as part of innovation sprint to display EDMRetentionJobService metrics in graphical form to demo to product owner, architect and EDM manager.
- **\$1M Cost Savings:** Served as Technical Lead to successfully migrate documents from legacy IBM systems to the Enterprise Document Management (EDM) platform.
- **Global Portal Migration:** Migrated and re-hosted the GSDR Quick Search Web Portal to the EDM Shipment Tracking Web Portal, seamlessly supporting tens of thousands of users across global divisions (GSPs, eOps, 1Source, EMEA/APAC, ETD, FTN, and Express/Ground/Freight).
- **Revenue Enablement:** Enhanced EDM Web Services for Special Services adoption, directly enabling an expected **7% revenue growth** in FY25 to target an **\$8M revenue increase**.
- **Concurrent Batch Processing:** Designed scalable micro-services featuring service discovery and API gateways to execute concurrent batch processing across multiple EDM repositories for retention policy enforcement.
- **High-Volume Data Migration:** Engineered a fault-tolerant Java utility capable of processing error retries and safely migrating hundreds of millions of documents from Documentum to Oracle and Datastax.
- **Application Modernization:** Modernized legacy Currency applications from SOAP to REST architecture and introduced CI/CD pipelines to streamline deployment, and created metrics dashboards.
- **Proof of Concept (POC):** Developed a Spring Boot POC project utilizing embedded Cassandra and Spring Data repositories to model and validate the CDS to Datastax conversion.
- **Core Enhancements:** Developed the EDMJmsClient component for email/fax capabilities and built a Java utility for asynchronous recovery of missing Archive documents.
- **PCI Compliance:** Delivered interim solutions for EISTC PCI compliance by routing redacted and unredacted airway bills securely to EISTC and RWC/EC until encrypted storage solution was in place..
- **InfoSec Collaboration:** Partnered directly with InfoSec to implement the eKMS API for credit card-indicated airway bills.

- **SSL Implementation:** Developed the EDM Core Web Services SSL layer, and independently built and installed SSL certificates.
- **Cloud & Audit Tools:** Created Google Cloud Platform (GCP) bulk export scripts to support compliance, audit research, and legal document reporting.
- **Formal Commendations:** Earned three prestigious **FedEx Bravo Zulu Awards** for outstanding performance on RDS Phase IV, DataMark (Mexico/India), and the EISTC PCI compliance projects.
- **Leadership Praise:** Received formal **FedEx Bravo Zulu** recognition from LSSI management for developing and sharing an innovative Okta authentication solution.
- **Frontend Performance Optimization:** Implemented critical performance improvements for the EDM HTML5 Viewer and enhanced features for the Revenue Document Storage (RDS) management web portal.
- **FedEx Growth & Learning**
 - Participated in the FedEx Hackathon to individually develop a Thymeleaf REST-based Spring Boot UI application that leveraged FedEx Cloud Native Principles with an aim to improve the FedEx experience by gathering client UAT feedback and storing it in a database. The application was built, deployed and run using Cloud Foundry Pivotal PaaS environment, and created a video to demo the results.
 - Participated in the FedEx Growth and Learning program to migrate the IceFaces/JSF-based Spot Escalation application to Spring Boot JSF and multiple datasource JPA implementation using Cloud Native Principles. The application was built, deployed and run using Cloud Foundry Pivotal PaaS environment and demo given to the Marketing IT team.

ADDITIONAL SOFTWARE ENGINEERING EXPERIENCE

Walt Disney World | Lake Buena Vista, FL | *Technical Specialist*

- Developed Java-based enhancements to the J2EE-based Vignette Content Management and Delivery System to enable parks, resorts, products and services data to be managed through workflow and delivered through configured published channels to various targets within the Sales and Booking Composite Application Systems.
- Developed Java-based enhancements to the Recommender module to read and store scoring data generated by Revenue Management for use by booking agents and to drive the strategic products and services offers presented for sale on the public internet.

M2 Systems Corporation (Muscato Corporation) | Orlando, FL | *Senior Software Engineer*

- Developed and maintained software modules to interface with ENGIN, a multi-platform online transaction processing switch that provides an intelligent bridge between different systems, applications, and devices. Software development included healthcare message/batch file formatting and processing, network protocol support, requester/server communications, MQSeries interface, task scheduler, Oracle PL/SQL, web services, and debit card transaction processing.
- Biggest onsite development contracts included Blue Cross/Blue Shield and Sacred Heart Medical Center.
- During development, worked directly with CEO who knew the core product code intimately, and travelled with his team to customer sites on many occasions to provide support.

TriCom, Inc. (ISR Global Telecom) | Orlando, FL | *Embedded Systems Engineer*

- Became part of a spin-off company of only 6 employees and developed embedded systems to convert TANDEM Clip line protocol tasks to the Sierra Wide Area Network (SWAN) concentrator.
- Deployed independently to Germany to rollout production software and execute rigorous Acceptance Testing at the DaimlerChrysler corporate facility.

Lockheed Martin Corporation (Martin Marietta) | Orlando, FL | *Systems Engineer*

- Co-Op Student Worker during college hired to work in Engineering due to high math.
- Developed simulations to analyze navigation, tracking system performance, and fixed-point scaling algorithms for the Central Guidance & Control Group.
- Formally commended for developing a ground-based tracker simulation to evaluate hardware and software improvements to a FLIR/LTT controlled turret and to determine feasibility of tracking air targets. Included mountain terrain, 2-D target images, background edge gate and tracking window borders, and 2-color video within the tracking window.
- Utilized simulation block diagrams of missile subsystems including airframe and actuator dynamics, sensors and filters, and feedback control loops to digitize filters and differentials.
- Utilized statistical analysis tools to perform fly-out sensitivities, transfer alignment analysis, and filter sizing and tuning for various IMU candidates to determine navigation requirements.

CERTIFICATIONS & TRAINING

Udacity AI Tech Practitioner Training

Generative AI Fundamentals

Achieved Accomplished AI Solutions Architect Rating

GitHub Copilot Training & AI Engineering Workshops

FedEx Webinar Series

Mobile Application Development Certification

University of California, Irvine

Java Sun-Certified Programmer

Authorized Testing Center, Orlando, FL
