

FEDEX WORK SUMMARY DETAILS (past to present)

- As part of EDM Migration, developed EDM Home Web portal entry page and IDM/IMAGE role-based access to support the re-hosting and migration of the legacy GSDR Quick Search portal residing on Genesis WebLogic servers to be moved to EDM servers. This involved reconfigurations for Application Server/ALBS, CSM, WSSO, Policy Domain Configuration, IDM/IMAGE, ESC, database and firewall. The total number of supported users including GSP, Ops, 1Source, EMEA/APAC, ETD, FIN, Express, Ground and Freight users is in the tens of thousands.
- **Received Federal Express Bravo Zulu Award Hall of Fame award for Above and Beyond for my participation in the support of Enterprise Document Management (EDM) migration to the Enterprise Data Center – West and upgrading Documentum to version 6.7, which housed some of the world's largest repositories of data from FedEx.**
- **Partnered with InfoSec to develop encryption solution utilizing KMS API Java code interface for credit-card indicated Airway Bills. This solution was later enhanced to design and implement the Documentum encrypted repository store for unredacted airbills and ACL implementation for dual redaction-encryption on AWB ingestion. As part of this design, an interim solution was quickly developed to meet EISTC PCI compliance by channeling the redacted images to EISTC until the permanent encrypted solution was in place. HTTPS was utilized for communication of these unredacted airbills to RWC and EC.**
- Developed new core functionality to extend EDM Enterprise Web Services for CC redaction/encryption/SSL that is being recognized in adoptions at SEACHange.
- Developed EDM Core Web Services SSL layer and built and installed SSL certificates.
- Developed EDM Core Web Services whitelist configuration capability.
- Developed enhancements to the third-party Snowbound HTML5 Viewer application to optimize the user experience by adding new business features for various clients such as EPS Pricing UI Project, and to improve performance due to network latency observed by IDMS.

- **Worked with Datamark Mexico/India teams to resolve slow loading/latency issues while viewing images, and improved performance by gathering network trace data, implementing client browser cache and header cache control (expires) solutions, versioning, and modifying user preferences to remove thumbnail view. Received a Bravo Zulu Award from manager for this work.**
- As part of RDS Phase IV Project, developed enhancements to the EDM Revenue Document Portal (RDS) to improve search performance by replacing the web service layer with direct DB queries.
- As part of RDS Phase IV Project, developed enhancements to the EDM Core Web Services to enable ingestion and retrieval of ED4 reports and metrics that were adopted by FDS.
- **Technical lead for a team of offshore developers in delivering capabilities for RDS to get all RDS documents migrated from IBM to EDM so that IBM contract could be terminated, resulting in ~\$1 million savings for the company.**
- Developed web services for India XS POD project and changes for Mobius retirement project.
- **Developed EdmJmsClient, a Spring JMS template publisher/subscriber component to integrate with EDM applications to interface with NDS/ENS for email/fax functionality.**
- **Worked with NDS to establish small and large file size queues for sending email notifications to RDS users.**
- Provided support for client adoptions including CDUS to move to the Enterprise Web Services and EDM Shipment Portal.
- **Developed EDM's first set of microservices that were automatically built and deployed in Jenkins CloudBees CI/CD with SonarQube A rating, passing JUnits, and high code coverage.**
- **Developed EDMLocationService, EDM's first Eureka Server utilizing Gradle Spring Boot with Spring Cloud Netflix and Zulu load-balancing for use by EDM to register and discover its microservices.**

- **Developed EDMLocationService, EDM's first REST-based Gradle Spring Boot microservice that calls PLES service to retrieve the country code based on location code, and stores in memory EHCache. Worked closely with LSSI team.**
- **Developed EDMRetentionDateService, REST-based Gradle Spring Boot microservice that resolves Retention Policy date that can be applied to EDM documents processed by EDMRetentionJobService and Split Repository job clients.**
- **Developed EDMRetentionJobMonitorService Gradle Spring Boot/JPA service that monitors performance, and corrects ACL errors reported by the EDMRetentionJobService, and sends email notifications of status to EDM On-Call.**
- **Developed EDMRetentionJobService, a Gradle Spring Boot JPA-based standalone Java job that connects to both Documentum and Oracle databases. Modernized the original TSG code by adding Java 8 technologies, Eureka, Spring JPA with Hibernate, Spring Profiles, Spring Properties, Spring Retry Template, Spring REST Template, c3p0 connection pooling, batch processing, and multi-instance concurrent transaction processing.**
- **Designed and developed the microservices for Retention to run on all 3 EDM Documentum repositories concurrently (ICT, INTL, DOM).**
- **Developed Java utility to facilitate migration and error replay from Documentum to DSE and Oracle, notably INTL which successfully migrated hundreds of millions of documents. Worked closely with Scott Wyatt (Sr. Enterprise Architect) on this migration project.**
- **Developed Java Spring Boot Utility to recover missing ePRS Pricing Agreement documents to Archive DB. This was accomplished by gathering data from DSE using DBLink, calculating new Retention Date based on group data, and sending it to the EDM 2.0 Core Services REST Controller Group Update endpoint to trigger doc event to update DSE, GCP and Archive DB.**
- **Team Received Customer Core FY24 Q4 Winner recognition.**
- **Joined Currency team to bring my skills (GIT, Java/Spring, Spring Boot, Gradle, Jenkins CI/CD) to jump-start the renewal/modernization of the legacy Currency applications and build/deploy processes.**

- Removed Dev Framework and WebLogic from all Currency applications/ processes to realize cost savings.
- Developed AppD configurations and performance dashboards.
- Developed Splunk dashboards to enable monitoring of Currency endpoint counts/errors per EAI, and daily volume metrics reports that are emailed out to management daily.
- Migrated all Currency batch jobs and web applications to Spring Boot Gradle and build/deployment through CI/CD Jenkins pipelines.
- **Collaborated with CONDOR Factory Team to move the modernized Currency applications to CONDOR.**
- Developed OKTA validation with caching and scheduled auto-generation of tokens for Currency client calls to CDS to be compliant with InfoSec security guidelines.
- **Received Bravo Zulu from LSSI management for sharing my OKTA coding solutions with LSSI team members.**
- Implemented Logback logging with unique transaction/request ids.
- Developed Spring Boot Gradle DataStax POC project using embedded Cassandra with Spring Data repositories to test out the CDS to DataStax conversion.
- **Provided on-call production support, CSR/UAT test support to clients, attended Command Center bridge calls and root cause research when required, addressed OVO alerts and incidents as a member the Production Support On-Call team.**
- **Worked closely with Technical Director, Enterprise Architecture & IT Modernization and Senior Enterprise Architect to give status on root cause analysis and solution for an issue with performance test environment in EDCW for web service czt380, which represents the distributed replacement for transit commit calc on mainframe as part of the overall mainframe to distributed effort, calling Currency Conversion web service. Resolved the issue by increasing cache expiration time and increasing HTTP connection pool connections.**

- Used ValueEdge Octane to create and fix QC defects.
- Prepared MTP pre-load and checkout activities, load book creation and review, CAB spreadsheet entries and review, and production load day checkout using JMeter, Dynatrace, Splunk, AppD, Grafana.
- Engaged and collaborated with team members in daily Scrum, load retrospectives, design and code reviews, PI planning events, daily status meetings, and Sprint demos.
- Development to support GCP to Azure Migration POC.
- **Developed process/tool in GCP to gather PPOD documents from GCP in bulk to give to legal team for audit research and reporting.**
- Implemented Java 17 upgrades with the help of Copilot to research and fix Java version and configuration incompatibilities.
- Debug and research code fixes for Angular UI defects.
- Provided GitHub Actions (GHA) CI/CD testing and research support for new GHA workflow/pipeline creations for multiple EDM applications.
- **Developed new SPECIAL SERVICES document classification implementation in the EDM 2.0 Core and Archive Web Services and loaded to production successfully. It has projected a 7% revenue growth in FY25 and aims to achieve an \$8 million revenue target through enhanced customer reach supported by sales and marketing efforts.**
- Developed EDM Core Web Service enhancements to enable group-level attribute to be used for retention start date calculation (adopted by SPECIAL SERVICES).
- **Completed Copilot Citizens Training and cc13303: Generative AI Fundamentals training with a score of 234/300 (level of Accomplished AI Solutions Architect).**
- **Use Copilot to increase coding velocity, improve code quality, shorten development cycles, and solidify design concepts.**
- **Developed JMeter JMX test scripts to replace Insomnia.**

- **Used Copilot to rapidly develop JMeter scripting tools, the most recent to enable PPOD document lookups by tracking number in DSE and perform REST service API soft delete on those documents for the business.**
- To support AI fluency and AI adoption, attended GitHub Copilot Training Sessions, GitHub Copilot Fundamentals Session, GitHub Copilot Engineering Workshop, Thriving in the Age of AI, Growth and Learning - Speed Training, All-Stars: Learn how Microsoft Copilot can help you become more efficient, Building Future Capability at FedEx, FedEx Connect: Data Spotlight Series, Gen AI - Individual & Enterprise Perspective, AI Prompt Engineering Workshop.
- Attended Dynatrace Training: Intro to Dynatrace, Technical Office Hour, Application Observability, Dashboards & Custom Views, Infrastructure Observability.

Extras

- **Participated in the FedEx Hackathon to individually develop a Thymeleaf REST-based Spring Boot UI application that leveraged FedEx Cloud Native Principles with an aim to improve the FedEx experience by gathering client UI feedback and storing it in a database. The application was built, deployed and run using Cloud Foundry Pivotal PaaS environment, and a video created to demo the results.**
- **Participated in the FedEx Growth and Learning program to migrate the IceFaces/JSF-based Spot Escalation application to Spring Boot JSF and multiple datasource JPA implementation using Cloud Native Principles. The application was built, deployed and run using Cloud Foundry Pivotal PaaS environment and demo given to the Marketing IT team.**
- **Developed React application as part of innovation sprint to demo EDMRetentionJobService metrics in graphical form. This project utilized Node.js and NPM package manager.**
- **Completed the Mobile Application Development certification (Android, iOS, HTML5/CSS3, RESTful services) using FedEx tuition program.**
