Senior Full Stack Software Engineer | Full Stack AI Engineer

Senior Full Stack Software Engineer specializing in scalable event-driven enterprise platforms, distributed systems, and AI-enabled applications. Proven track record delivering business-critical solutions across FedEx, Disney, Lockheed Martin, healthcare, financial services, telecommunications, and startup environments. Hands-on experience building full stack Generative AI applications using Python, React, FastAPI, LangChain, LangGraph, Langfuse, RAG, Declarative GenAI, and multi-agent workflows.

TECHNICAL SKILLS

Python, Java, React, JavaScript, SQL, CQL
LangChain, LangGraph, Langfuse, Ollama, RAG, AI Agents, Multi-Agent Workflows, Prompt Engineering, Pandas, Vector Databases, Copilot, Claude, VS Code
FastAPI, Spring Boot, REST APIs, Microservices, Eclipse
PostgreSQL, ChromaDB, Qdrant, Oracle, Cassandra Datastax (DSE), JMS, JSON
Docker, Git, CI/CD, Jenkins, GCP, Azure, GitHub, Cloud-Native, Cloud Foundry (Pivotal)
Langfuse, Dynatrace, Splunk, AppDynamics, Grafana, JMeter
OKTA, SSL/TLS, Encryption (KMS), Secure API Design

AI PROJECTS

RAG Research Assistant - Built full-stack chatbot supporting general chat and document ingestion, semantic search, vector retrieval, local LLM deployment, and streaming responses using Ollama, LangChain, and FastAPI.

Multi-Agent Research Approval Assistant - Developed LangGraph AI agents with human-in-the-loop approval, stateful workflows, resumable execution, and Langfuse observability within Docker.

Enterprise Autonomous Analytics & Knowledge Engine - An enterprise-grade, full-stack AI platform built on a decoupled microservices architecture. The system features an intelligent LangGraph Multi-Agent Orchestrator, a Production RAG Pipeline backed by Qdrant, automated Text-to-SQL data synthesis via PostgreSQL, and a deterministic Declarative UI Engine built with React and Node.js.

The system operates entirely on local, open-source LLMs (Ollama/Llama 3), ensuring zero API costs, total data privacy, and predictable deterministic UI layouts using strict JSON schema validation contracts.

PROFESSIONAL EXPERIENCE

FedEx Services | *Full Stack Developer III* | 14+ years

- Developed scalable micro-services with service discovery and API gateway to perform concurrent batch processing on multiple EDM document repositories to apply retention policy.
- Developed performance and feature enhancements to Revenue Document Storage portal.
- Technical lead to enable migration of documents from IBM to EDM resulting in \$1M cost savings for FedEx.
- Developed EDMJmsClient core component to provide email/fax capability.
- Received formal Bravo Zulu Award for RDS Phase IV project.
- Developed Java utility to facilitate batch migration of hundreds of millions of documents from Documentum to Datastax with fault tolerance and error retry.
- Developed Java utility to trigger asynchronous processing to recover missing documents to Archive.
- Implemented EDM HTML5 Viewer performance improvements. Received formal Bravo Zulu Award for this work for DataMark Mexico/India.
- Partnered with InfoSec to implement eKMS API for credit card indicated airway bills.
- Developed EDM Core Web Services SSL layer, and built and installed SSL certificates.
- Developed interim solution for EISTC PCI compliance by channeling redacted airway bills to EISTC until permanent encrypted storage solution could be in place. Utilized https to channel unreacted airway bills to RWC/EC. Received formal Bravo Zulu Award for this work.
- Migrated and re-hosted the legacy GSDR Quick Search Portal to EDM Shipment Portal while supporting tens of thousands of users for IDM/IMAGE access, CSM and firewall. Users included GSPs, eOps, 1Source, EMEA/APAC, ETD, FTN, Express/Ground/Freight.
- Modernized Currency applications from SOAP to REST, and introduced CICD. Received Bravo Zulu praise from LSSI management for sharing the OKTA solution.
- Developed Spring Boot POC project using embedded Cassandra with Spring Data repositories to test out the CDS to Datastax conversion and migration.

- Member of Production Support On-Call team to support CSR testing, production triage, and resolution of incidents and defects.
- Created GCP bulk export script for audit research and reporting of legal documents.
- Enhanced the EDM Web Services to facilitate Special Services adoption. This project enabled a projected 7% revenue growth in FY25 and aims to achieve an \$8M revenue target through enhanced customer reach supported by sales and marketing efforts.
- Used AI tools to accelerate development and problem resolution.

Walt Disney World | *Technical Specialist* | 7 years

- Developed Java-based enhancements to the J2EE-based Vignette Content Management and Delivery System to enable parks, resorts, products and services data to be managed through workflow and delivered through configured published channels to various targets within the Sales and Booking Composite Application Systems.
- Developed Java-based enhancements to the Recommender module to read and store scoring data generated by Revenue Management for use by booking agents and to drive the strategic products and services offers presented for sale on the public internet.

M2 Systems Corporation (Muscato Corporation) | *Sr Software Engineer* | 6 years

- Developed and maintained software modules to interface with ENGIN, a multi-platform online transaction processing switch that provides an intelligent bridge between different systems, applications, and devices. Software development included healthcare message/batch file formatting and processing, network protocol support, requester/server communications, MQSeries interface, task scheduler, Oracle PL/SQL, web services, and debit card transaction processing.
- Biggest onsite development contracts included Blue Cross/Blue Shield and Sacred Heart Medical Center.
- During development, worked directly with CEO who knew the core product code intimately, and travelled with his team to customer sites on many occasions to provide support.

TriCom, Inc. (ISR Global Telecom) | *Embedded Systems Engineer* | 5 years

- Became part of a spin-off company of only 6 employees and developed embedded systems to convert TANDEM Clip line protocol tasks to the Sierra Wide Area Network (SWAN) concentrator.
- Worked closely with driver and pSoS real O/S developers.
- Traveled to Germany to deploy my application at Daimler Chrysler customer site and perform Acceptance Testing.

Lockheed Martin Corporation (Martin Marietta) | *Systems Engineer* | 7 years

- Co-Op Student Worker during college hired to work in Engineering due to high math.
- Developed simulations to analyze navigation, tracking system performance, and fixed-point scaling algorithms for the Central Guidance & Control Group.
- Formally commended for developing a ground-based tracker simulation to evaluate hardware and software improvements to a FLIR/LTT controlled turret and to determine feasibility of tracking air targets. Included mountain terrain, 2-D target images, background edge gate and tracking window borders, and 2-color video within the tracking window.
- Utilized simulation block diagrams of missile subsystems including airframe and actuator dynamics, sensors and filters, and feedback control loops to digitize filters and differentials.
- Utilized statistical analysis tools to perform fly-out sensitivities, transfer alignment analysis, and filter sizing and tuning for various IMU candidates to determine navigation requirements.

CERTIFICATIONS & TRAINING

Udacity AI Tech Practitioner Training

Generative AI Fundamentals

Achieved Accomplished AI Solutions Architect

GitHub Copilot Training & AI Engineering Workshops

FedEx Webinar Series

Mobile Application Development Certification

University of California, Irvine

EDUCATION

BS Computer Science, Scientific Specialization, Cum Laude

Academic Scholarship, Time-Shortened Degree

University of Central Florida, Orlando, FL

Minor Business Administration

University of Central Florida, Orlando, FL
