Senior Full Stack Software Engineer | Full Stack AI Engineer

Senior Full Stack Software Engineer specializing in scalable event-driven enterprise platforms, distributed systems, and AI-enabled applications. Proven track record delivering business-critical solutions across FedEx, Disney, Lockheed Martin, healthcare, financial services, telecommunications, and startup environments. Hands-on experience building full stack Generative AI applications using Python, React, FastAPI, LangChain, LangGraph, Langfuse, RAG, Declarative GenAI, and multi-agent workflows.

TECHNICAL SKILLS

Python, Java, React, JavaScript, SQL, CQL
LangChain, LangGraph, Langfuse, Ollama, RAG, AI Agents, Multi-Agent Workflows, Prompt Engineering, Pandas, Vector Databases, Copilot, Claude, VS Code
FastAPI, Spring Boot, REST APIs, Microservices, Eclipse
PostgreSQL, ChromaDB, Qdrant, Oracle, Cassandra Datastax (DSE), JMS, JSON
Docker, Git, CI/CD, Jenkins, GCP, Azure, GitHub, Cloud-Native, Cloud Foundry (Pivotal)
Langfuse, Dynatrace, Splunk, AppDynamics, Grafana, JMeter
OKTA, SSL/TLS, Encryption (KMS), Secure API Design

AI PROJECTS

RAG Research Assistant - Built full-stack chatbot supporting general chat and document ingestion, semantic search, vector retrieval, local LLM deployment, and streaming responses using Ollama, LangChain, and FastAPI.

Multi-Agent Research Approval Assistant - Developed LangGraph AI agents with human-in-the-loop approval, stateful workflows, resumable execution, and Langfuse observability within Docker.

Enterprise Autonomous Analytics & Knowledge Engine - An enterprise-grade, full-stack AI platform built on a decoupled microservices architecture. The system features an intelligent LangGraph Multi-Agent Orchestrator, a Production RAG Pipeline backed by Qdrant, automated Text-to-SQL data synthesis via PostgreSQL, and a deterministic Declarative UI Engine built with React and Node.js.

The system operates entirely on local, open-source LLMs (Ollama/Llama 3), ensuring zero API costs, total data privacy, and predictable deterministic UI layouts using strict JSON schema validation contracts.

PROFESSIONAL EXPERIENCE

FedEx Services | *Full Stack Developer III* | 14+ years

- Developed scalable micro-services for Enterprise Document Management (EDM) by utilizing Eureka service registry, API gateway, and Zuul load-balancing to perform concurrent batch processing on multiple document repositories to apply retention policy date based on country code retrieved from enterprise PLEFS service.
- Developed enhancements to Revenue Document Storage (RDS)
 - Decoupled web services and implemented direct connect queries that resulted in performance improvements in the portal.
 - Developed web service interface for FDS ingestion, retrieval and reporting of ED4 documents.
 - Technical lead for Agile team of developers to migrate documents from IBM to EDM resulting in \$1M cost savings for FedEx.
 - Developed EDMJmsClient core component to provide NDS/ENS email/fax capability.
 - Received formal Bravo Zulu Award for the RDS Phase IV project work.
- Developed Java to facilitate batch migration of hundreds of millions of documents from Documentum to Datastax with error retry capability.
- Developed Java batch web service to recover missing documents to Archive by recalculating retention date and calling EDM Core Web Service update to trigger doc event to update and store missing ePRS documents in DSE, GCP and Archive DB.
- Worked with the DataMark Mexico/India teams to improve performance of the EDM HTML5 Viewer by implementing client browser cache and header cache control (expires) solutions, versioning, and modifying configuration to remove thumbnail view. Received a formal Bravo Zulu Award for this work.
- Partnered with InfoSec to implement eKMS API for credit card indicated airway bills.
- Developed EDM Core Web Services SSL layer, and built and installed SSL certificates.
- Designed and implemented an interim solution needed for EISTC PCI compliance by channeling redacted airway bills to EISTC until the permanent encrypted storage solution could be in place. Utilized https to channel unreacted airway bills to RWC/EC. Received formal Bravo Zulu Award for my ability to deliver this interim solution quickly.
- As part of EDC migration, responsible for the migration and re-hosting of the legacy GSDR Quick Search Portal to EDM Shipment Portal, and provided support for the tens of thousands of users for IDM/IMAGE access, CSM and firewall. Users included GSPs, eOps, 1Source, EMEA/APAC, ETD, FTN, Express/Ground/Freight.

- Modernized Currency by converting SOAP web services/WebLogic to Spring Boot Gradle REST services with OKTA, and by implementing CI/CD automated pipelines to replace the manual processes. Received Bravo Zulu praise from LSSI management for helping team code OKTA.
- Developed Spring Boot POC project using embedded Cassandra with Spring Data repositories to test out the CDS to Datastax conversion and migration.
- Member of Production Support On-Call team to support CSR testing, production triage, and resolution of incidents and defects.
- Created GCP scripts to bulk export documents from GCP for the legal team to do audit research and reporting.
- Enhanced the EDM Web Services to enable SPECIAL_SERVICES documents ingestion/retrieval. This project has enabled a projected 7% revenue growth in FY25 and aims to achieve an \$8M revenue target through enhanced customer reach supported by sales and marketing efforts.
- Used Microsoft/GitHub Copilot to accelerate development by generating code, explaining complex logic, helping with Java upgrades, creating JMeter scripts, and debugging and fixing errors.

Walt Disney World | *Technical Specialist* | 7 years

- Developed Java-based enhancements to the J2EE-based Vignette Content Management and Delivery System to enable parks, resorts, products and services data to be managed through workflow and delivered through configured published channels to various targets within the Sales and Booking Composite Application Systems.
- Developed Java-based enhancements to the Recommender module to read scoring data generated by Revenue Management and store it to the scoring database that drives the strategic products and services offers presented for sale on the public internet and to the booking agents.

M2 Systems Corporation (Muscato Corporation) | *Sr Software Engineer* | 6 years

- Developed and maintained software modules to interface with ENGIN, a multi-platform online transaction processing switch that provides an intelligent bridge between different systems, applications, and devices. Software development included healthcare message/batch file formatting and processing, network protocol support, requester/server communications, MQSeries interface, task scheduler, Oracle PL/SQL, web services, and debit card transaction processing.

- Biggest onsite development contracts included Blue Cross/Blue Shield and Sacred Heart Medical Center.
- During development, worked directly with CEO who knew the core product code intimately, and travelled with his team to customer sites on many occasions to provide support.

TriCom, Inc. (ISR Global Telecom) | *Embedded Systems Engineer* | 5 years

- Became part of a spin-off company of only 6 employees and developed embedded systems to convert TANDEM Clip line protocol tasks to the Sierra Wide Area Network (SWAN) concentrator.
- Worked closely with driver and pSoS real O/S developers.
- Traveled to Germany to deploy my application at Daimler Chrysler customer site and perform Acceptance Testing.

Lockheed Martin Corporation (Martin Marietta) | *Systems Engineer* | 7 years

- Co-Op Student Worker during college hired to work in Engineering due to high math.
- Developed simulations to analyze navigation, tracking system performance, and fixed-point scaling algorithms for the Central Guidance & Control Group.
- Formally commended for developing a ground-based tracker simulation to evaluate hardware and software improvements to a FLIR/LTT controlled turret and to determine feasibility of tracking air targets. Included mountain terrain, 2-D target images, background edge gate and tracking window borders, and 2-color video within the tracking window.
- Utilized simulation block diagrams of missile subsystems including airframe and actuator dynamics, sensors and filters, and feedback control loops to digitize filters and differentials.
- Utilized statistical analysis tools to perform fly-out sensitivities, transfer alignment analysis, and filter sizing and tuning for various IMU candidates to determine navigation requirements.
